

# axiom oxr

## axi-om (ak' se-em) OXR (oxr):

Features our popular offset curve roof design (518e) with an integrated tower element in which the tower is placed partially within the main tunnel footprint.

This model maximizes the axiom benefits while still being a cost efficient design. The OXR promotes one tower element with a unique out rig roof beam design.

The OXR features a choice of daylight or metal roof systems, distinctive axiom trim and unique ACM and stone cladding systems. The Axiom OXR is available in several configurations.
